

ABSTRACT**MIXTURES OF MATERIALS**

A settable but non-adhesive mixture of materials which may be used in the laying of tiles and paving whereby the mixture may fill the gaps between individual tiles or paving elements to act as a filler to stabilise the elements without sticking to the surfaces thereof, the mixture including a particulate material which contains no more than 2% Aluminium Oxide and no more than 1% Ferrous Oxide thus to ensure a stabilised chemical composition of the mixture and to minimise staining of the tiles or paving elements when applied thereto.
